

Redi-Assist™ Manual Chain Hoists For Rolling Steel and Sectional Doors

- Significantly improved control over conventional models
- Increases door longevity
- Prevents doors from racing and crashing to the floor
- Reduces dangers of tangling and jamming chains
- Decreases need to reset the chain
- New or Retrofit

U.S. Patent No. 11,339,610 B2 • International Patents Pending

Alpine's Redi-Assist manual chain hoists feature an adjustable braking mechanism for controlled descent of the door. Further, they have a fail safe override which will stop the door should the braking mechanism fail.

This new line of innovative chain hoists comes in two models. The Redi-Assist™ may be used on new or retrofit rolling steel or sectional doors. It can be mounted directly to the wall, or with an auxiliary mounting bracket. The Redi-Assist™ HD is designed specifically for rolling steel doors, and mounts directly to the end bracket/headplate. Both feature a high reduction ratio for larger/wider rolling doors.
